

URBAN
SQUARE

COMMERCIAL SHOPFRONTS, DOORS & WINDOWS

Our Commercial range of shopfronts, doors and windows are suitable for any applications. Whether it's a new requirement or a change of an existing system we offer a broad range of solutions to meet all your needs. We install toughened glass shopfronts, aluminium windows, curtain walling, roller shutters and commercial doors suitable for commercial and residential properties.

We are dedicated to giving you the very best product and service with a focus on quality and affordability.

Urban Square offer a wealth of knowledge and experience within the architectural glass industry. Our friendly team is made up of project managers and skilled operatives, many who have worked in the glass industry for over 25 years.

We serve customers from across the UK, building long term relationships as their glazing systems partner for current and future projects.

We work with architects, designers, main contractors, interior fit out companies and direct with end users in Commercial, Industrial and the Domestic sector. We offer the widest range of glazing systems on the market and are not tied to any one manufacturer enabling us to ensure each project is matched with the optimum fitting system.

Our ethos is simple, to provide the best solution at the most affordable price.

We hope you enjoy our finished product as much as we enjoy providing them to you. If you have any questions or comments, please don't hesitate to contact us.

Frameless or toughened glass shopfronts are a popular choice for retail and commercial buildings due to their sleek, modern design.

Frameless glass doors can be incorporated within the shopfront either with top and bottom rails or with patch fittings to the corners or sides. The hardware is available in brushed and mirror polished stainless steel, RAL powder coated and anodised aluminium finishes with handles and locks to match. With thicker safety glass panels and no framework to the face toughened glass shopfronts create a modern, sophisticated shop window which is inviting to prospective customers who often decide whether to enter a shop or premises based on the look of the outside alone.

Frameless glass shopfronts are ideal for high end retail outlets, shopping centres, office receptions and all types of showroom where a clean, minimalist look will set your business apart from the rest.

Aluminium shopfronts are the most common form of shopfront used today.

With lightweight aluminium channels to the outside and vertical / horizontal dividers you can cater for any size of opening. Fully framed doors are inset into the framework to give a solid look. Thin toughened or laminated glass panels are often used in framed shopfronts making the overall cost lower than a frameless design which uses thicker treated glass. Aluminium is lightweight and corrosion resistant making it ideal to withstand whatever the British weather throws at it. The aluminium profiles can be supplied in a variety of anodised finishes as well as in powder coat paint format in a vast array of colours and special finishes.

Aluminium commercial doors are typically specified as entrance or exit doors to a building.

Aluminium commercial doors are typically specified as entrance or exit doors to a building. Commercial doors offer longevity coupled with a wide choice of hardware and security. Commercial doors are used in retail shops, showrooms, offices, schools, surgeries and apartment blocks. They are designed for high traffic applications, often with constant use meaning they must be robust and easy to repair if damaged. Whilst most commercial doors are made for manual operation they can also be rotating, semi-automated using pressure pads or fully automated with sliding doors such as those found at airports and in super markets. Some of the advantages commercial doors offer is that they can open in and out through 180 degrees and are compatible with the widest range of handles and locks as well as working with access control systems. They can be supplied in a broad range of powder coat paint finishes as well as anodised, metallic and special finishes.

Steel roller shutters are ideal for after-hours security in commercial and residential environments where blanket coverage is the aim.

Solid shutters offer no view from the outside whereas perforated shutters offer limited view with the bonus of letting in light. They are extremely versatile to suit most customers' needs with small holes to each lath making them ideal for shops and showrooms where visibility by customers is required after hours. They are also ideal for premises where there is no glass frontage behind or where ventilation is required.

We offer solid and perforated shutters in galvanised finish or in polyester powder coated finish to any RAL or BS colour as standard. Our roller shutters can be either manually or electrically operated by key switch, rocker switch and remote handset.

Curtain wall systems are cladding systems used on the external face of a building.

These cladding systems are generally associated with multi-storey buildings and typically comprise a lightweight aluminium frame onto which glazed or opaque infill panels are fitted. These infill panels are often described as 'glazing' whether or not they are made of glass.

These curtain walls separate the interior from the exterior, only supporting their own weight and the loads imposed on them, such as wind, seismic and so on which they transfer back to the primary structure of the building. This is in contrast to many forms of traditional construction in which the external walls are a fundamental part of the primary supporting structure of the building.

The curtain wall method of glazing allows glass to be used in large uninterrupted areas creating consistent attractive facades. The flexibility of product can allow for the control of thermal and solar considerations and ultimately the design statement for the building. One example is Pilkington's Suncool™ range combining one coating efficient thermal properties with some of the lowest Ug values achievable in insulating glass units and a broad range of solar-control options.

Urban Square can provide you with Aluminium windows and doors to suit all types of project, from commercial to residential.

Modern Aluminium framed windows share little of the performance and durability issues with which old versions were criticised for in terms of levels of condensation and poor thermal performance. Older windows were limited to white or anodised silver finishes, with hardwood outer frames requiring annual maintenance. The double glazed units comprised standard annealed glass with air trapped between offering far less in the way of solar control, thermal performance and lifespan.

Aluminium windows have evolved significantly, fixing directly to the structure without the need for a sub frame. They are thermally efficient with gas filled sealed units comprising solar control coated toughened glass panels and multi layered laminated glass panels for improved heat and sound insulation as well as bring additional safety. They are far more secure with multi-deadbolt frames, locking handles and laminated or toughened glass. They are also more weather resistant with triple glazed versions widely available.

Furthermore, there is a huge choice of styles available in a wide range of standard colours. The use of aluminium allows for the frames to be thinner than the more common PVCu designs allowing for more glass and therefore more light to transmit through them.
